Â

Â

Dear Mr, Ms.

I was excited to learn that your company is searching for an experienced electronics engineer with proper knowledge on the field of "generation and power supply" in the local newspaper LinkedIn. I have enclosed my resume with this letter that will give you information of my work experience and educational background.

Â Here I have worked with electrical systems for cars both the light weighted ones as well as the heavy loaded vehicles. Most of my work concentrated with circuit designing and other circuit theory. Being in the electronics engineering field, we had to focus on the development and applications of the electrical systems. In addition to this, I am a goal oriented person and have a good team working skills. I am curious to know about modern technology and am detail oriented with good logical thinking. My passion and love for this work has made me where I stand now and apply for this post.

It would be an honor to be a part of your organization and work for your company's objectives which aims to make and provide better service and help in the development of the country.

If you have any query, please call me at 216 23019936 or drop me an email at messaoudi.omar.01@gmail.com

Â

Thank you so much for your valuable time and considering my letter for the position.

Sincerely, Omar Messaoudi Â
